OUR PRODUCT

JISYNC

JISYNC (Global Synchronize System) is a bridge application system connecting the company's internal systems with external party application systems (Host to Host). An example of Jisync that we have created is the integration between the company's inventory system and the Ceisa 4.0 Customs system.

PI-ERPYS

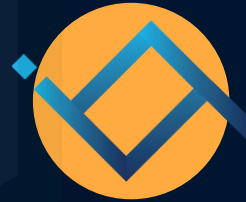

PIERPYS (Pusaka Enterprises Resource Planning System) or also known as Pusaka ERP is an ERP system which is the result of the development of our previous product, namely IBOZ. The PIERPYS that we built aims to provide easier management and calculation of company resources that are more accurate and connected between departments. In PI-ERPYS there are many features for all departments in a company, apart from being easier to use, the PIERPYS system can also be integrated with external systems (3rd parties). The PIERPYS that we built is customizable (can be adjusted to the company's business processes).

OUR PRODUCT

HARPYS

HARPYS (HR & Payroll System) is an application system that we created to fulfill employee management needs, starting from employee data, attendance data, leave calculations, discount calculations to bonuses which will become reports as a basis for salary calculations.

IBOZ

IBOZ (Inventory Bonded Zone) is inventory created for companies using Bonded Zone facilities. At IBOZ, development has been carried out and can be integrated with customs systems such as the TPB Online Module and Ceisa 4.0, the results of this development have resulted in our product called PIERPYS. This will really help companies to minimize user errors when inputting to create customs documents.

OUR PRODUCT

IWOZ

IWOZ (Inventory Warehouse Zone) is a Bonded Warehouse Inventory system that is integrated with the customs system, making it easier to use and track mutations and stock of goods that are very important for warehousing companies.

ILOZ

ILOZ (Inventory Local Zone) is an application for companies that do not use customs (general) facilities, which is useful for making work easier for companies and is suitable for warehousing companies, MSMEs, retail stores and the like.

ICLOZ

ICLOZ (Inventory Central Logistics Zone) is an Inventory system application for companies receiving Bonded Logistics Center (PLB) facilities which is very useful for meeting the needs of the company's import and expenditure recording system and stock management.
